

LF FA 8-12T (4X2)

Always Working

- Ideal for transporting small loads of sand/gravel
- Sturdy exterior and outstanding driver comfort
- Excellent stability and manoeuvrability

The LF FA 8-12t provides a lightweight vehicle chassis with a spacious, comfortable cab. The body builder friendly chassis can be prepared for various body types, including three-way tipper bodies or rear tipper bodies.

Designed with compact dimensions, excellent visibility and unmatched maneuverability, the DAF LF FA 8-12t has the agility and mobility that makes it a popular vehicle for complex jobs in and around construction sites and down narrow streets.

CONSTRUCTION

Always Working

Trucks that operate within the Construction and Industrial Waste segment are always working and often have complex bodies such as cranes, mixer drums, tippers or hooklifts, which means they are not easily replaced if they break down. That's why these vehicles are designed to be reliable and durable and can manoeuvre across surfaced roads, building sites and quarries. In short, they are always working to serve the challenging transport segment for the building industry, road-construction and surface mining.

SAND, GRAVEL

Carrying the load

Sand and Gravel applications cover a wide range of vehicles. Whether it's small skip loaders or heavy-duty tippers, DAF has a vehicle for every solution. From the lightweight and versatile LF vehicles, to heavy duty construction vehicles for heavy lifting in harsh, off-road environments. Designed for its robustness and durability. With an in-cab tipping valve preparation and provisions for a rear tipping hinge, the DAF CF Construction chassis is ready for the toughest of jobs. To minimise the risk of damage, the straight front axle provides a large approach angle for maximum ground clearance.
